

## ABOUT IPSI 1.4

*Mariucci M.T., Montone P., 2020. IPSI 1.4, Database of Italian Present-day Stress Indicators, Istituto Nazionale di Geofisica e Vulcanologia (INGV). doi:<http://doi.org/10.13127/IPSI.1.4>*

IPSI database, "Italian Present-day Stress Indicators", is a georeferenced repository of information on the crustal present-day stress field maintained at INGV. It consists of horizontal stress orientations analysed and compiled in a standardized format and quality-ranked for reliability and comparability on a global scale. Nowadays the database contains 928 data records updated to January 2020. The next update will be until December 2020 and is scheduled to be released within the first months of 2021.

IPSI collects information of the Italian contemporary stress within the upper 40 km of the Earth's crust, from different stress indicators grouped in the following main categories:

- Borehole breakouts
- Earthquake focal mechanisms
- Active fault-slip data

The dataset can be downloaded in different format.

Italian data are part of the [World Stress Map](#)
