A Volcanic Example: Ash from Kasatochi Volcano (2008)

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

> Where is the most likely boundary of the detectable ash?

Key Questions

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

- Where is the most likely hazard/ no hazard boundary?

Key Questions

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

- Where is the most likely hazard/ no hazard boundary?
- How can we apply traditional statistical measures to probabilistic hazard maps?

Key Questions

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

- Where is the most likely hazard/ no hazard boundary?
- How can we apply traditional statistical measures to probabilistic hazard maps?
- What is the connection between underlying parameter space, a physical model, and a PHM for the process?

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

1 Basic Theory

2 Example 1: Granular Flow on an Inclined Plane

3 Example 2: Natural Debris Flow: Atenquique, 1955

Constructing a prob. hazard map (PHM)

Ensemble Physical Modelling

PHM Theory

Hyman,
Bevilacqua,
Bursik

- $\beta \in \mathcal{B} \subset \mathbb{R}^n$ (model input parameters)
 $f : \mathcal{B} \rightarrow \mathbb{R}^+$ which measures the parameter space \mathcal{B} .

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

Constructing a prob. hazard map (PHM)

Ensemble Physical Modelling

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

- $\beta \in \mathcal{B} \subset \mathbb{R}^n$ (model input parameters)
 $f : \mathcal{B} \rightarrow \mathbb{R}^+$ which measures the parameter space \mathcal{B} .
- Physics model output variable:
 $h = h(\mathbf{x}; \beta)$ (flow height, ash concentration, etc.)

Constructing a prob. hazard map (PHM)

Ensemble Physical Modelling

PHM Theory

- $\beta \in \mathcal{B} \subset \mathbb{R}^n$ (model input parameters)
 $f : \mathcal{B} \rightarrow \mathbb{R}^+$ which measures the parameter space \mathcal{B} .

- Physics model output variable:
 $h = h(\mathbf{x}; \beta)$ (flow height, ash concentration, etc.)

- Indicator Function: $\mathbf{1}_{\Omega(\beta)}(\mathbf{x}) := \begin{cases} 1 & \{\mathbf{x} \mid h(\mathbf{x}; \beta) > h_0\} \\ 0 & \{\mathbf{x} \mid h(\mathbf{x}; \beta) \leq h_0\} \end{cases}$

Basic Theory

Hyman,
Bevilacqua,
Bursik

Example 1:

Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

With a parameter PDF $f(\beta)$.

PHM Definition

$$\phi(\mathbf{x}) := \int_{\mathcal{B}} f(\beta) \mathbf{1}_{\Omega(\beta)}(\mathbf{x}) d\beta \quad (1)$$

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

With a parameter PDF $f(\beta)$.

PHM Definition

$$\phi(\mathbf{x}) := \int_{\mathcal{B}} f(\beta) \mathbf{1}_{\Omega(\beta)}(\mathbf{x}) d\beta \quad (1)$$

If $\beta \sim \mathcal{U}$:

$$\phi(\mathbf{x}) := \int_{\mathcal{B}} \mathbf{1}_{\Omega(\beta)}(\mathbf{x}) d\beta \quad (2)$$

PHM

Probability at a point

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

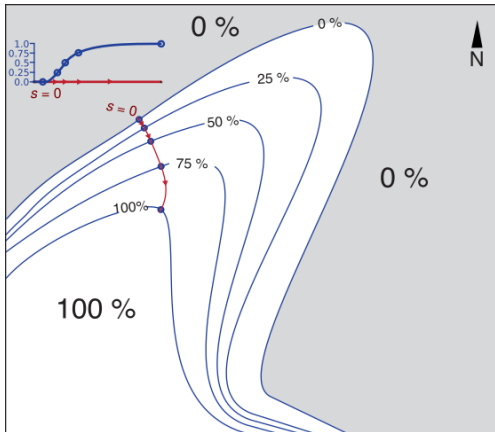

Integral Curves:

$$\frac{d\mathbf{x}_n}{ds} = \nabla\phi$$

$$\phi(s) := \phi(\mathbf{x}_n(s))$$

$$= \mathbb{P}(s_{bdy} \leq s)$$

> CDF for the hazard
boundary along the
integral curves

PHM

Flow boundary CDF

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

> CDF for the hazard
boundary along the
integral curves

> Can define associated
PDF with derivative
along curve

PHM

Flow boundary CDF

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

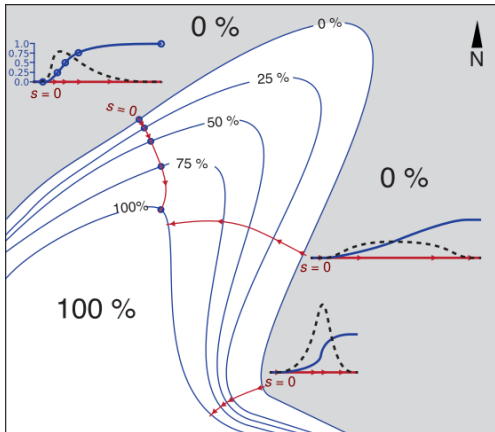

Example 2:
Natural Debris
Flow:
Ateniquie,
1955

> CDF for the hazard
boundary along the
integral curves

> Can define associated
PDF with derivative
along curve

> Apply to all curves

> Q: Global definition
for the PDF?

Prob. Hazard Density Map (PHDM)

Flow boundary PDF

PHM Theory

Connect the PDFs on all the integral curves:

Hyman,
Bevilacqua,
Bursik

$$\frac{d\phi(s)}{ds} = \nabla\phi(\mathbf{x}_n(s)) \cdot \frac{d\mathbf{x}_n}{ds} = |\nabla\phi(\mathbf{x}_n(s))|^2 \quad (3)$$

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

Prob. Hazard Density Map (PHDM)

Flow boundary PDF

PHM Theory

Connect the PDFs on all the integral curves:

Hyman,
Bevilacqua,
Bursik

$$\frac{d\phi(s)}{ds} = \nabla\phi(\mathbf{x}_n(s)) \cdot \frac{d\mathbf{x}_n}{ds} = |\nabla\phi(\mathbf{x}_n(s))|^2 \quad (3)$$

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

$$\int_0^\infty \frac{d\phi}{ds} ds = \int_0^\infty |\nabla\phi(\mathbf{x}_n(s))|^2 ds = 1 \quad (4)$$

Example 2:
Natural Debris
Flow:
Atenquique,
1955

Prob. Hazard Density Map (PHDM)

Flow boundary PDF

PHM Theory

Connect the PDFs on all the integral curves:

$$\frac{d\phi(s)}{ds} = \nabla\phi(\mathbf{x}_n(s)) \cdot \frac{d\mathbf{x}_n}{ds} = |\nabla\phi(\mathbf{x}_n(s))|^2 \quad (3)$$

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

$$\int_0^\infty \frac{d\phi}{ds} ds = \int_0^\infty |\nabla\phi(\mathbf{x}_n(s))|^2 ds = 1 \quad (4)$$

Example 2:
Natural Debris
Flow:
Atenquique,
1955

Def PHDM

$$\psi(\mathbf{x}) = \frac{1}{Q} |\nabla\phi|^2 \quad (5)$$

where

$$Q = \int_{\Omega^0} |\nabla\phi|^2 dA$$

Central Tendency

Mean (and variance)

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

On each integral curve:

$$\mu = \int_0^{\infty} 1 - \phi(\mathbf{x}_n(s)) ds \quad (6)$$

Central Tendency

Mean (and variance)

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

On each integral curve:

$$\mu = \int_0^{\infty} 1 - \phi(\mathbf{x}_n(s)) ds \quad (6)$$

$$\sigma^2 = \int_0^{\infty} s^2 \frac{d\phi}{ds} ds - \mu^2 \quad (7)$$

Central Tendency

Mean (and variance)

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Ateniquie,
1955

On each integral curve:

- $$\mu = \int_0^{\infty} 1 - \phi(\mathbf{x}_n(s)) ds \quad (6)$$

- $$\sigma^2 = \int_0^{\infty} s^2 \frac{d\phi}{ds} ds - \mu^2 \quad (7)$$

- Spatial Mean: $\mathbf{x}_\mu = \mathbf{x}_n(\mu)$

Region Encompassing

1σ Uncertainty: $\mathbf{x}_{\mu \pm \sigma} = \mathbf{x}_n(\mu \pm \sigma)$

Central Tendency

Median and Mode

PHM Theory

Hyman,
Bevilacqua,
Bursik

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

Example 2:
Natural Debris
Flow:
Atenquique,
1955

On each integral curve:

$$\mathbf{x}_{median} = 50\% \text{ Prob. Contour} \quad (8)$$

$$\mathbf{x}_{mode} = \arg \max_{\mathbf{x}_n(s)} \psi \quad (9)$$

Conclusions

PHM Theory

Hyman,
Bevilacqua,
Bursik

> PHM propagate uncertainty in parameter space into uncertainty in geographic space and represent a distribution for the location of the likely boundary of the hazard (not just point-wise probability).

Basic Theory

Example 1:
Granular Flow
on an Inclined
Plane

> Can define a hazard density function (PHDM - square gradient of PHM) which gives a spatially varying PDF for boundary location

Example 2:
Natural Debris
Flow:
Atenique,
1955

> Can calculate the full suite of typical statistical quantities from the PHM (moments, mode(s), likelihood, etc.)

> Distribution of hazard boundary location is typically non-normal (even worse - asymmetric, spatially varying, multimodal)

> See full text at:
