

Supplementary Material for the article “*Deformation pattern of the northern sector of the Malta Escarpment (offshore SE-Sicily, Italy); fault dimension, slip prediction and seismotectonic implications*” by Salvatore Gambino, Giovanni Barreca, Felix Gross, Carmelo Monaco, Sebastian Krastel, and Marc-

André Gutscher

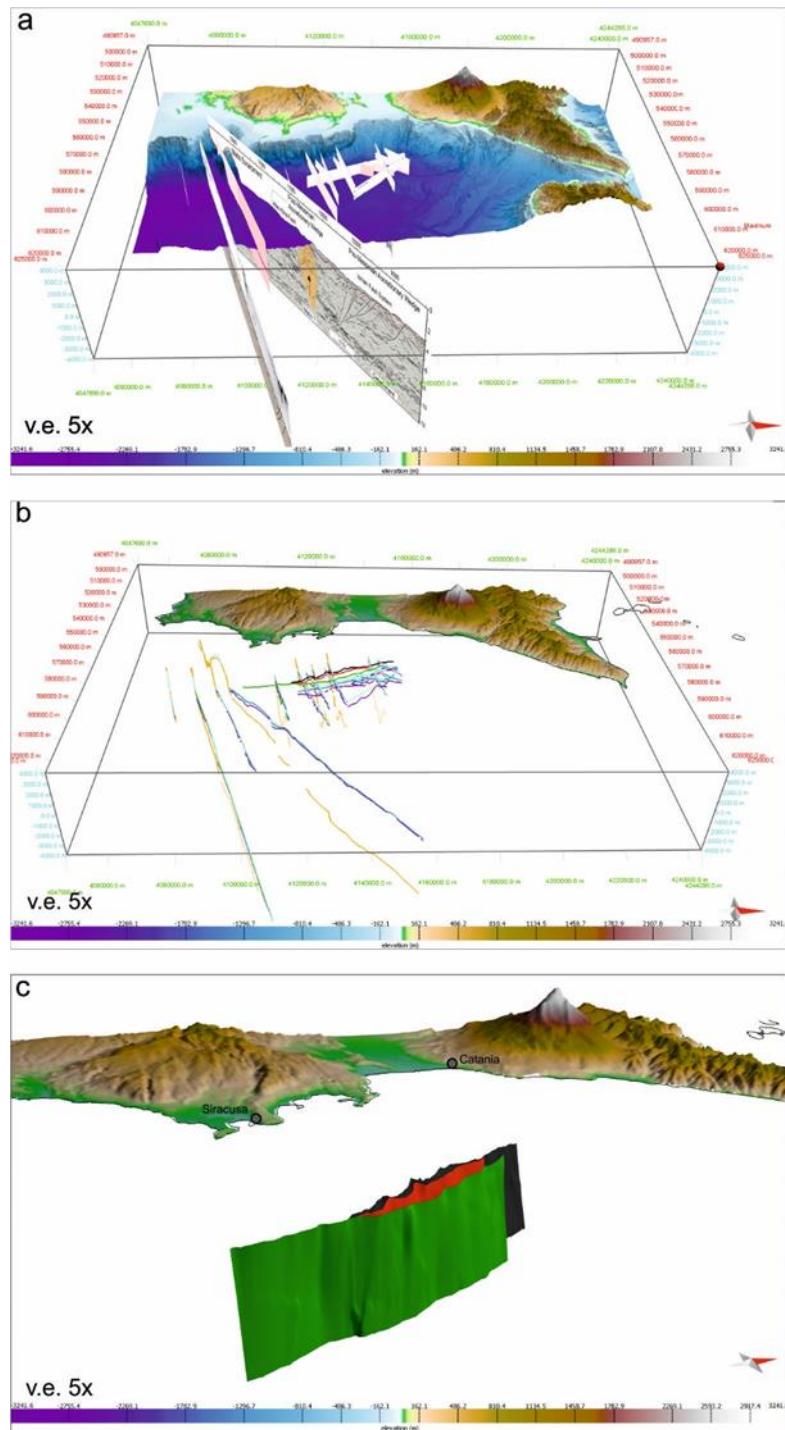

Supplementary Figure 1 –POS496 Seismic lines (T.W.T.) and interpretations of main stratigraphic boundaries and tectonic structures. a) p507. b) p509. c)p605. d) p202. e) p607. f) p701.

Supplementary Figure 2 - Time to depth-converted (see Table 1 in this section) interpreted seismic profiles highlighting major (e.g. F1, F2 and F3) and minor detected faults and the recognized seismic units (PQ2, PQ1, Mes and Pre-Mes) and their bounding reflectors (S1, S2, S3 and S4).

Seismic Units	Interpreted age	Time interval (Myr)	Seismic velocity (m/s)	References
PQ2	Middle Pleistocene-Holocene	0.65- 0.0117	1760	Micallef et al., 2018
PQ1	Pliocene	5.33-2.58	2280	Micallef et al., 2018; Camerlenghi et al., 2019
MES	Messinian	7.246-5.33	4000	Butler et al., 2015; Maesano et al., 2017
Pre-MES	Pre-Messinian	>7.246	3250	Gallais et al., 2011; Kokinou et al., 2013; Micallef et al., 2018

Supplementary Table 1 – Acoustic velocities adopted to depth-convert the entire seismic dataset.

Supplementary Figure 3 – Adopted workflow to model fault surfaces a) Unpublished (POS496 and CIRCEE-HR seismic dataset) and published seismic profiles (Polonia et al., 2016;2017; Argnani and Bonazzi, 2002, 2005, 2012) and a high-resolution bathymetry (Gutscher et al., 2016;2017) interpreted by picking the main reflectors and faults. b) Reference lines interpolation and 2 ½ D-modelling of fault surfaces (c).

Supplementary Table 4 – a) Throw and propagation rates for F1, F2 and F3 faults. Pliocene rates (vertical and propagation) are calculated on the difference between the S2 and S3 displacements. Middle-Pleistocene rates (vertical and propagation) are calculated on the difference between the S3 and S4 displacements. Holocene rate is calculated only for the throw based on the scarp height; b) Mean and Maximum throw rates based on the fault-displaced S2, S3 and S4; c) Mean and Maximum propagation rates based on the fault-displaced S2 and S3.
